SUMMARY

Senior Software Engineer and Composable Commerce Specialist with 8 years of building resilient systems. Technically versatile across JavaScript, TypeScript, Java and Python programming. Currently driving innovation through AI readiness—harnessing AI orchestration and autonomous services to build intelligent, scalable e-commerce platforms.

CERTIFICATIONS & RECOGNITIONS

- AWS Certified Generative AI Developer [Credential ID: 036a883f8f494731ab6197b75b36528a] [verify here](#)
- AWS Certified Solutions Architect [Credential ID: PQZDYFVKVBQE16KL] [verify here](#)
- Oracle Certified Agentic AI Developer [verify here](#)
- Salesforce Certified B2C Commerce Cloud Developer [Credential ID: 6718429] [verify here](#)
- Sanity.io CMS Certification [verify here](#)
- Safe Security (earlier Lucideus) Cyber Security Training Completion Certificate [Credential ID: LCEH/50055] [verify here](#)
- Freshworks recognised my efforts for my contribution to their responsible disclosure program, and added my name in their Hall of Fame list. [verify here](#)

ACADEMICS

Master of Computer Applications (Regular Degree)

(2014 - 2016)

Tula's Institute, Dehradun, Score - **71.77%**

Bachelor of Computer Applications (Regular Degree)

(2011 - 2014)

Lalit Narayana Mishra College of Business Management, Score - **72.46%**

SKILLS

- **Backend:**
 - Primary stack: JavaScript, TypeScript, Node, Express.js, Next.js
 - Secondary stack: Python, Java
 - Cloud: AWS SQS, EC2, S3 Bucket
 - Misc: Kafka, Redis, Vector DB, OAuth 2.0, OIDC, JWT, RESTful, GraphQL
- **Frontend:**
 - React.js, Next.js, SSR/SSG, ISR with Stale-While-Revalidate (SWR)
 - Core Web Vitals, Code-Splitting, Lazy Loading, Asset Optimization, Input Validation using Formik/Yup
 - Tailwind CSS, Builder.io, Sanity.io
- **AI & GenAI Systems:**
 - Multi-LLM Systems with fallback to Groq, Tool-calling, Prompt Engineering
 - RAG, Embedding Strategies, Semantic search, Multi-hop Retrieval
 - Document OCR, Audio Transcription, Video Analysis, Image Embeddings
- **Developer Tools:**
 - Git, GitHub, Bitbucket, Postman, GraphQL
 - GitHub Copilot, Cursor, Groq API, Claude, Ollama

WORK EXPERIENCE

- **Technical Specialist** | **Zensar Technologies** Bengaluru (Apr'26 — Present)

Woolworths Storefront: Developed targeted Proof-of-Concepts (PoCs) to assess Commercetools capabilities across order workflows and promotional engines, validating the technical feasibility of replacing the existing ATG platform with a composable commerce solution.

- **Senior Software Engineer | BOSCH BGSW (Payroll - LanceSoft)**

Bengaluru (Oct'24 — Apr'26)

Movado Storefronts: Developed and optimized a high-performance, composable multi-site e-commerce platform for Movado across two storefronts (movado.com & movadocompanystore.com). Utilized SFCC and modern frontend tools (Alokai, Builder.io) to deliver scalable, dynamic, and secure experiences through cross-functional collaboration. This aligned with business goals by successfully reducing the marketing team's dependency on engineering for page launches by ~80%.

Key Contributions and Achievements:

- Developed and owned features end-to-end and optimized dynamic, composable frontend using Builder.io's visual editing platform with Next.js Page Router. Built modular, reusable components and content models that enabled the marketing team to independently assemble and launch landing pages, supporting multi-site scalability and contributing to strong Core Web Vitals scores.
- Developed custom RESTful APIs that handled data transformation, streamlined business logic, and optimized SCAPI responses, improving data flow and frontend performance. Maintained a high-performance middleware layer using the Alokai storefront code and handled integration with SFCC SCAPI APIs.
- Implemented third-party service integrations (Adyen, Yotpo) into the Alokai-Builder.io-Next.js frontend by creating robust API connection logic. Ensured secure and reliable payment and review functionality without degrading the core user experience.
- Applied performance optimization strategies by utilizing a deep understanding of SFCC SCAPI hooks and data structures to guide backend API adjustments. Paired this with Next.js static generation and server-side rendering (SSR) strategies to reduce frontend payload and enhance rendering speed and SEO.

- **Senior Software Engineer | Icreon (earlier Change CX)**

Noida (Jun'23 — Jun'24)

Masons CSA: Engineered a headless Customer Support Assistance (CSA) Application for Masons serving 5 storefronts, leveraging Next.js, Commercetools, and MACH architecture principles. By focusing on robust UI development and integrating a Node.js BFF orchestration layer with Saga patterns, optimized overall performance—reducing redundant upstream API calls by ~40% and cutting average page load times by ~30%.

AAFES Storefront: Engineered a scalable, decoupled, and headless e-commerce storefront for shopmyexchange.com using Next.js and Commercetools. Customized PDPs and built core front-end components (PLP, Cart, Checkout) that seamlessly supported a ~10K+ product catalog, while reducing API response times by ~35% through optimized data-fetching patterns.

- **Software Engineer | Mastek**

Noida (Jan'22 — Jun'23)

Commercetools Storefront Accelerators: Developed a composable storefront decoupling frontend and backend units using Next.js, Builder.io, and Commercetools GraphQL APIs. Architected a Yoga-GraphQL and Express.js BFF layer following a microservices architecture. By integrating Fault Isolation and Exponential Backoff patterns, this production-ready accelerator successfully reduced new storefront setup time by ~60% and cut API failure rates.

Fabric Inc Storefront Accelerator: Built a technology-agnostic composable storefront accelerator from the ground up, designed to fully decouple frontend and backend units and freely adapt to any technology stack. Developed the frontend in Next.js and architected a Backend for Frontend (BFF) layer using an Express.js server. By exposing custom endpoints and integrating Commercetools HTTP REST APIs alongside Contentful CMS for data fetching, this reusable architecture cut backend integration complexity by ~50% and reduced time-to-market for new storefront builds.

- **Solution Engineer | Copious Software**

Patna (Jul'19 — Jan'22)

App for Professional Service Businesses

- AWS infrastructure: EC2, RDS, S3, Lambda Functions
- Implemented intelligent integration patterns for workflow automation (Zapier, Slack, email notifications)
- RESTful API design with proper HTTP semantics; OAuth 2.0 for third-party integrations
